

Workshop in Methods + CEWiT

Fall 2016 Python Workshop Series

Introduction to Python

NaLette Brodnax

Center of Excellence for Women in Technology

Python is a widely used, general purpose programming language. This workshop will introduce the basic elements of Python that are commonly used for data cleaning, analysis, visualization, and other applications. Participants will also learn how to set up a “development environment” for Python on their personal computer. Computers with Python pre-loaded are also available in the SSRC on a first-come, first-served basis. This workshop is intended for social scientists who are new to programming. No experience is required.

This workshop is the first in a three-part series offered in collaboration between the Workshop in Methods and the Center of Excellence for Women in Technology. Join us for Introduction to Web Scraping with Python (September 30) and Introduction to Using APIs with Python (November 11). Visit <http://go.iu.edu/wim> for more details.
